

CONSULTING

# N.Services

**Constructive,  
Customer focused  
Consulting and Design Services**

**Network Services provides qualified consultancy services to fixed, mobile or Internet operators and IT service providers within the communication solution. Network Services recognises that the success of your business is hinged on your ability to deploy technology to get the job done – on time, on budget, and with superior results.**

**Our team of experts can be deployed to design, maintain and support your network - or to expand your IT department for projects that require a high level of expertise.**

---

Network Services offers consulting services at an hourly or fixed rate that address virtually any area of data communication with regard to maintenance or change processes, including:

## ENTERPRISE and GOVERNMENT

- o Bid work - Analyse requirements and procurement of the communication solution. Our consultants are available to help create clear and concise RFPs that generate qualified, uniform, and accurate bids.
- o Migration WAN from one vendor to another or from one WAN technology to another.
- o Security - Network Services experts can conduct a thorough security audit and assessment to prescribe the best solutions for network security, e.g. authentication and reducing threats.
- o Wireless Solution – we can help your business design, install and manage your wireless network. We can also help you identify key factors for your mobility solutions.
- o Our network engineers can support your LAN/WAN environment for optimised and high performance network traffic along with upgrades to support e.g. voice and video services, WAN optimisation etc.

## OPERATORS, TELCOS and ISP's

- o Within large data networks there is an ongoing cost-optimization process. The change from older more costly access technologies to more cost efficient access can often lower fixed cost and ease maintenance.
- o Development and deployment of new data communication services, e.g. IP VPN, Ethernet etc.
- o Network Planning – building and roll-out of data communication networks for service providers, e.g. design and implementation of IP networks with MPLS technology.
- o Technical sales support of LAN/WAN services, e.g. as a system engineer for IP based services.
- o For IT service providers, Networks Services consultants function as implementation engineers in the transition phase or qualified maintenance engineers.

## Our staff can function in roles such as:

- o Customer adapted education.
- o Project management – Network Services Project Manager Teams have wide experience in complex telecom projects – knowledge and skilled in PROPS, PPS and IPMA project models.
- o Testing and pilot test - Providing expertise, testing services of network capabilities and service levels at hourly or fixed-price quotes that are comprehensive and easy to understand.

## Summary

In general, our consultants or teams of consultants often take on assignments within maintenance and project work within data communications. We function as experienced network engineers, technical project leaders, coordinators, project leaders and senior consultants within telecommunications.

The consulting delivered is designed to support your needs to maintain your network and to implement new technology and application to optimize the network.
